ANZSCTS Cardiac Surgery Database Program

ABOUT US

The ANZSCTS Database Program was founded in 1999 as an initiative of the Australian and New Zealand Society of Cardiac and Thoracic Surgeons (ANZSCTS), Monash University, and the Victorian Department of Health. Since then, the program has expanded nationally to become Australia's only adult cardiac surgery database.

The ANZSCTS Database Program is an established quality assurance program with aims to:

- Monitor patient treatment and outcomes
- Track serious complications
- Benchmark unit performance nationally
- Standardise quality of treatment and care for patients
- Encourage research into improved cardiac healthcare

The Data Custodian is Professor Christopher Reid, Director of the Centre for Cardiovascular Research and Education in Therapeutics (CCRET), Monash University. CCRET is responsible for the management and maintenance of the program.

Westmead Private

QUEENSLAND

Greenslopes Private
Holy Spirit Northside
John Flynn Private
Mater Health Services
Sunshine Coast University Private

WESTERN AUSTRALIA

St John of God, Subiaco

GOVERNANCE

The Governance of the ANZSCTS Database Program is within the operating principles established by the Australian Commission for Safety and Quality in Healthcare.

All program matters are governed by the ANZSCTS Steering Committee. Membership includes clinical representatives, epidemiologists, health policy and quality of care experts.

PRIVACY

All information collected is treated as strictly confidential and is protected by privacy legislation. Information disclosure is compliant with the law and only occurs with patient permission.

REPORTING

Clinical reports on endorsed key performance indicators are provided to participating hospitals quarterly.

A more comprehensive report is also released annually and is available to all registry stakeholders.

Site managers and surgeons may access a range of downloadable online reports through the ANZSCTS Database web system.

RESEARCH

The ANZSCTS Database has 17 years of data, with over 130,000 cases.

The Database encourages collaborative research and project applications can be made to the ANZSCTS Database Research Committee.
