Webinar Overview

This webinar will both summarise and open discussion on the 10-year follow up results of JCOG0802 RCT. The study originally set out to determine whether segmentectomy was as good as lobectomy for the surgical treatment of early stage, non-small cell lung cancer (NSCLC).

The panel will present their own views of the 10-year follow up results and facilitate discussion on whether this impacts surgical management of NSCLC moving forwards in ANZ.

This webinar is suitable for clinicians of all experience levels, currently performing thoracic surgery in Australia and New Zealand.

Faculty

A/Prof. Gavin Wright
St Vincent's Hospital
Melbourne, VIC
